

17 years old Tejaswini is the only daughter to her parents. She was born and brought up in Bangalore. She was a very bright kid from her early childhood and excelled in the areas of academic as well as extra-curricular activities.

Everything was going on smooth until few years back she experienced weakness suddenly. Upon medical diagnosis she was identified with HMSN (hereditary motor and sensory neuropathy), which is a form of neuropathy characterized by weakness and muscular atrophy of upper and lower limbs. Due to this she has weakness in both of her lower limbs, which makes standing and walking for long a challenge.

Recently she paid a visit to MI and after a thorough assessment she was provided with bilateral Ankle Foot Orthosis. This will assist her in regaining strength in her lower limbs. She was also instructed couple of strengthening therapy exercises to bring positive improvement. She has been performing quite well in her academics and currently she is pursuing her Bachelors in Commerce.
