Dr. Meriel Norris

PhD, MA, MCSP, FHEA

Reader in Physiotherapy
College of Health & Life Sciences,
Dept. of Clinical Sciences
Brunel University London

3rd & 4th, April 2020

Mobility India, Bengaluru

9:30am - 05:30pm

Introduction:

Formulating a clear and feasible research question is the first part of the research process and is essential prior to creating and conducting a research plan. Its purpose is to articulate an existing uncertainty in an area of concern, while indicating the direction of investigation. Although the world of rehabilitation is teeming with questions and unresolved problems, identifying which are priority and which are feasible to respond to is essential. This highlights the need for a thorough and critical awareness of the literature/research conducted to date.

Mobility India (MI) conducts a 2 day workshop for healthcare professionals and students with the aim to familiarise participants on the purpose and approach to formulating a research question including the process of conducting a literature review in a systematic way.

Target Audience:

- Prosthetist & Orthotist
- Physiotherapist
